

DERIN YESUDAS

Data and Business Analyst | MSc Business Analytics, University College Cork

Dublin, Ireland | derinyesudas@gmail.com | [linkedin.com/in/derinyesudas](https://www.linkedin.com/in/derinyesudas) | derinyesudas.github.io | github.com/derinyesudas

Eligible to work in Ireland. No visa sponsorship required. Available full-time from 1 November 2026.

PROFILE

Earned an MSc in Business Analytics at 2:1 Honours from University College Cork, building on a First Class Honours degree in Finance from the University of Mumbai. Spent a year at Tata Consultancy Services validating US insurance and pensions data, where I delivered 99% accuracy on a ten-person pilot team, the highest of the ten, and wrote the procedure the team worked from. Combine the statistics, forecasting and visualisation of the MSc with the habits of production work: checking data before it moves, documenting the process and explaining findings to the people who act on them. Work with Microsoft Excel (certified at 100%), SQL (learning), Power BI, Tableau, Python and R. Seeking a data, business or reporting analyst role in Ireland.

WHAT I BRING

- **Accuracy under pressure:** Ranked first for accuracy on a ten-person pilot team, validating contracts on a three-hour turnaround, each one peer-reviewed and checked weekly by the client.
- **Finance and analytics together:** Combined a First Class Honours Finance degree, covering portfolio management and risk, with an MSc in forecasting, predictive analytics and visualisation.
- **Insight people can act on:** Built a Power BI alert console that ranks flagged trading events by risk and shows why each was flagged, so a reviewer knows where to look first.
- **Process discipline:** Wrote and maintained the procedure a ten-person team worked from, keeping it current through near-weekly client changes so everyone worked to one standard.
- **Clear communication:** Served as the single point of contact between client and internal teams, and explained changes and findings in plain terms to non-specialists.
- **Quick to learn:** Earned a full processing licence within a month at TCS, learning the OMNI and Legacy systems.
- **Reliability:** Recorded no absences across seven months of kitchen shifts while studying full-time, after a year of permanent night shifts at TCS.
- **Builder's curiosity:** Shipped a job tracker that monitors 335 Irish employers' career sites and a rule-based CV and cover-letter generator, both live and built with Claude.

EDUCATION

MSc Business Analytics, 2:1 Honours - University College Cork

September 2025 - September 2026

Modules: Business Data Analysis and Visualisation, Predictive Analytics, Prescriptive Analytics, Business Forecasting, Python for Business Analytics, Data Analytics for Business Enterprise, Design Thinking for Business Analysis, AI as a Disruptive Technology, Business Analytics for Sustainability, Emerging Topics in Business Analytics, The Practical Application of Business Analytics, Applied Research in Business Analytics.

- Applied Power BI, Tableau, Python and R across the coursework, from forecasting economic time series to building a live alert console for market surveillance.
- Collaborated in more than ten group projects across the year, from a six-person applied research project with a Deloitte industry mentor to a design sprint and a design thinking challenge.

BMS Finance, First Class Honours - Annasaheb Vartak College, University of Mumbai

June 2021 - May 2024

9.13/10 CGPI

Modules included Investment Analysis and Portfolio Management, Corporate Finance, Strategic Financial Management, International Finance, Risk Management, Financial and Cost Accounting, Auditing, Business Statistics and Research Methods, Operations Research.

PROFESSIONAL EXPERIENCE

Data Processor - Tata Consultancy Services, Mumbai

August 2024 - August 2025

Insurance and pensions vertical. Permanent night shifts covering the client's US business day.

- Processed death claims for a US pensions provider on the OMNI and Legacy administration systems, checking each case against its documents before release. Gained a full processing licence within a month and carried the same service levels as colleagues with years more experience.
- Earned a place on a ten-person pilot team for a US life insurer in January 2025 on my manager's recommendation, validating group annuity contract data for 140 contract types ahead of a system migration, on a three-hour turnaround per contract.
- Delivered 99% accuracy across every contract processed, the highest of the ten, under two-way peer review with results checked by the client every week.
- Wrote and maintained the team's operating procedure, updating it after each near-weekly client change so all ten processors worked from one standard, and trained colleagues on the process.
- Acted as the single point of contact between the client and internal teams, joining client calls with my Team Lead, and became the team's go-to person whenever requirements changed.
- Selected as the first Star of the Month for the process.

PROJECTS

Stock Market Manipulation Detection

Power BI | Data Sourcing | Technical Writing

MSc applied research project, team of six, with an industry mentor from Deloitte

- Built the Live Alert Console in Power BI for a market surveillance framework covering 467,799 real 2024 Russell 2000 trading records, ranking critical-risk events with the reason each was flagged so a compliance reviewer could triage without opening the full dashboard.
- Helped source the trading data, wrote several sections of the 38-page report and the project journal, structured the presentation script and co-created a short scenario that explained the pump-and-dump cycle to a non-specialist audience.

Ireland Job Tracker

github.com/derinyesudas/ireland-job-tracker

Personal project, built with Claude and run on GitHub Actions

- Built an automated tracker that checks 335 Irish employers' own career sites on a schedule, rather than job boards, so new entry-level roles reach a live board as early as possible.
- Reached 316 of the 335 sites in a recent full scan, with 977 open roles from 179 employers live on the board.
- Compiled the employer register behind it, with the careers page, sector, entry routes and hiring system for each company, and encrypted the research files with AES-256 so the data behind the board stays private.

CV and Cover Letter Generator

derinyesudas.github.io/cv-generator

Personal project, built with Claude

- Directed the build of a rule-based web app that turns a pasted job ad into a tailored one-page CV and cover letter, drawing only on an approved fact bank so nothing is invented.
- Set the rules it follows, tested it against real Irish job ads and kept it to a release suite of more than 270 automated checks.

Time-Series Forecasting in R

R | Regression | ARIMA

MSc Business Forecasting coursework

- Fitted multiple regression models on wage data and ARIMA models on producer price data, using differencing, ACF and PACF plots and model diagnostics.
- Tested stationarity with Augmented Dickey-Fuller and Phillips-Perron tests, and the long-run link between consumer and producer prices with Engle-Granger cointegration.

Pathfinder

Design Thinking | User Personas

MSc Design Thinking for Business Analysis, team LumenEire

- Conceived the Pathfinder wayfinding idea for the team's project and helped create the user personas.

TECHNICAL SKILLS

Data and BI tools: Microsoft Excel, advanced, certified at 100% (lookups, joins, pivot tables, Power Query) | SQL (learning) | Power BI with DAX | Tableau | Microsoft Access, Word and PowerPoint, certified

Programming and statistics: Python | R (regression, ARIMA forecasting, stationarity and cointegration testing) | Business statistics and research methods

Analytics methods: Predictive and prescriptive analytics | Business forecasting | Data validation and migration | Dashboard and report design

Business and domain: Insurance and pensions operations | Investment analysis and portfolio management | Risk management | Corporate finance

Ways of working: Stakeholder and client communication | SOP and process documentation | Maker-checker peer review | Design thinking and user personas | AI-assisted building with Claude Code and Cowork

Languages: English, CEFR C1 (Duolingo 140/160) | Hindi, working proficiency | Malayalam, working proficiency

OTHER EXPERIENCE

Customer Store Representative - Circle K

2026 - present

Kitchen Assistant - Blarney Castle Hotel, Co. Cork

January - August 2026

- Worked full shifts in a busy commercial kitchen alongside the full-time MSc, with no absences in seven months, and was commended in a written reference for punctuality and accuracy.

Volunteering - College volunteering, including visits to an orphanage and a care home, and blood donation drives
